

HFE Human Factors and Ergonomics Namibia Newsletter

Can Human Factors assist with Cyber Security?

The latest trends show that **human error remains the primary gateway** for cyberattacks, including phishing, social engineering, and accidental data sharing.

While investments in technical defences rise, behaviour such as ignoring security warnings or delaying updates continue to be exploited by attackers.

Organisations are responding by **prioritising behaviour change, continuous training, and culture**—recognising that resilient security depends as much on people as on technology
